

— FOR IMMEDIATE RELEASE —

CXT Software Partners with AirClic

Leaders in Business Process Mobilization and Courier Resource Management to Provide Integrated Solution for Mobilizing Core Processes of Courier Software.

Newtown, PA – January 30, 2006 – AirClic®, a leading provider of business process mobilization solutions, today announced it has entered into a business partnership relationship with CXT Software, a leading provider of courier software and mobile resource management technology for the same-day, time-critical courier and delivery industries.

The relationship encompasses two elements:

- CXT Software has integrated AirClic MP with CXT Software's products including X Dispatch 6.0 – a solution specifically created to assist the courier, LTL, trucking, and same day delivery companies in their everyday operations. CXT Software's customers are now able to leverage the AirClic solution set as part of a holistic solution to enable mobile and remote workers to accurately capture and transmit events and transactions in real time.
- CXT Software will be an authorized reseller of AirClic MP and AirClic's device integration solutions which include Motorola®, Symbol®, Sprint Nextel, Baracoda™.

"We're thrilled that CXT Software has chosen AirClic as its key partner for mobilizing their core solution offering," said John Parker, president of AirClic. "The integration between AirClic's MP Platform and CXT Software's X Dispatch system will allow customers to enrich and extend their delivery monitoring and management capabilities to include every step of the delivery process."

"At the end of the day, AirClic enabled us to provide our customers with the most cost-effective, flexible and easy-to-use and implement mobile solution," said Dan Calderone, president of CXT Software. "By partnering, our customers are gaining a rich and deep mobilization solution, paired together with our full-featured courier management and delivery solution."

AirClic MP™ is the market's first comprehensive, on-demand platform for accelerating and streamlining remote and mobile processes that can be easily integrated into existing solutions. The flagship product, AirClic MP, combines sophisticated application design tools; simple and inexpensive data-capture technologies including the Motorola AC25 for the Motorola i355 phone; powerful back-end software for data aggregation, migration, reporting, and analysis; and an efficient harvest technology for easy integration with the partner's product offerings.

AirClic MP Platform Components

The AirClic MP platform consists of several technologies that provide an integrated, flexible solution for automating mobile processes:

[more >](#)

AirClic MP Design—AirClic’s innovative, proprietary design system lets process designers graphically depict processes. An application designer creates a process diagram and, with a single click, that diagram is transformed into a fully functioning AirClic MP application and transmitted to the mobile phone for immediate use.

AirClic MP Capture—Equipped with an AirClic MP Capture device, mobile workers can use one device to scan virtually any standard bar code. AirClic also supports other types of data capture, including RFID.

AirClic MP Reporter—At the back office, service reps and managers can view the movement and activities of people and assets. As companies aggregate information, they can analyze it for trends and anomalies through a dedicated reporting tool or through a simplified Web interface.

AirClic MP Harvest—AirClic MP includes back-end server utilities for Microsoft® Windows®, Linux® and UNIX that can deliver captured data in multiple formats, including CSV/text, Microsoft® Access®, SQL, and Oracle®, and others for export to billing, time, asset-management, auditing, ERP, CRM, SCM and other business systems.

About AirClic®

Headquartered in Newtown, Pa., AirClic is a leading provider of mobile process automation solutions that enable companies to quickly, easily, and cost-effectively deploy mobile applications based on their business processes. With AirClic, organizations have fast, inexpensive visibility to see the “who, what, where, when, and why” of their field operations and drive new levels of accountability and customer service without the high costs and risks of custom implementations.
