CXT Software partners with Conductive Technology Corporation and Integrates NFO (Next Flight Out) into X Dispatch

Phoenix, AZ – March 6, 2008 – CXT Software, a leading edge provider of same day and expedited delivery software announces their partnership with Conductive Technology Corporation. This partnership enables seamless NFO (Next Flight Out) integration into X Dispatch, the flagship delivery software solution from CXT Software.

NFO (Next flight Out), which is based on information provided via Conductive Technologies' Corporation Pathfinder service, gives CXT Software's customers the opportunity to access this information quickly and efficiently without leaving the order screen. The new NFO feature of X Dispatch, allows one to find information about flights for shipments that are time critical.

With the click of a button, this feature will take the address information, pick-up time, and delivery time and use it to give you a list of flights and relevant tracking information that will ensure on-time and efficient national package delivery. All potential flight candidates are organized with color coding to notify CSRs if the flight has risk factors that put the delivery in jeopardy of on-time performance.

The information that is returned includes: Flight number, carrier, departure time, arrival time, airport codes, equipment type, distance from the pick up to the airport, distance from airport to delivery, weather conditions and expected delay times. Once flights have been analyzed and a best-candidate is chosen, a simple double click on the flight desired will automatically populate on the order form under the flight tab.

NFO maximizes efficiency while reducing the risk of selecting flights that are more likely to be late. Additionally, through CXT Software's partnership, its customers gain access to Conductive Technologies' Pathfinder Web decision support tool which includes world wide air schedules (both commercial and cargo), flight status and e-mail event notification.

"The same-day air component of X Dispatch does everything we would expect from our air courier software and the integration with Conductive Technologies' Corporation Pathfinder service enables operations to find and trace flights more efficiently. We have been very happy with X Dispatch since we switched our ground operations 3 years ago and moved our air operations 3 months ago with the same positive results," says Stuart Cohen, Vice President of Crossroads Courier.

About Conductive Technology

Since 2002 Conductive Technology Corporation has focused its creative and technical expertise at the freight logistics industry. Working closely with industry experts, we have diagnosed the challenges and created innovative technical enhancements to help forwarders acquire and manage information in this highly competitive marketplace.

Conductive Technology Corporation is the developer of Pathfinder, an information delivery platform used by logistics professionals to save time and money in the making and monitoring of air cargo scheduling decisions. By using Pathfinder to consolidate, add value to and deliver real-time information, shippers can enhance customer
