

-FOR IMMEDIATE RELEASE-

CXT Software Releases X Dispatch Version 10.2

Phoenix, AZ, July 26, 2010. CXT Software, a leader in providing automation technology to expedited delivery and last-mile distribution businesses, announced today the release of X Dispatch Version 10.2.

“X Dispatch Version 10.2, our latest semi-annual general release, includes over 100 new customer-driven product enhancements,” according to Derek Figg, CXT Software’s Vice President of Engineering. “Our product suite continues to evolve with the industry. Version 10.2 includes improvements in shipper integration, including a 100 percent performance improvement in our Advanced Shipment Notification processing, as well as enhancements to our X Stream integration technology. In addition, we incorporated a web-based, customer-facing route tracking solution into our X Internet product to improve route visibility for our last-mile distribution customers and shipping integration partners. Version 10.2 also includes changes specific to the needs of our Canadian customers.”

“We have been running the beta version of X Dispatch 10.2 for the last few months,” according to Randy Edmonds, Senior Vice President of Corporate Transit of America. “The new web-based route tracking feature provides our shippers with real-time updates on the progress of their shipments through our delivery network.”

“All builds of X Dispatch go through our rigorous in-house quality assurance process to test new features and work out bugs, and Version 10.2 has proven to be the most stable yet,” adds Tom Herman, CXT Software’s Technical Support Manager. “We have also significantly improved the context-based help system. Beginning with Version 10.2, the ‘F1’ key takes users to an all new web-based user manual, providing easy access to pertinent, up-to-date information.”

Version 10.2 is now available for download at CXT Software’s support portal website at no extra charge for licensed X Dispatch customers.
